FOR IMMEDIATE RELEASE

MYDIGITAL ID REACHES 1 MILLION USER REGISTRATIONS

The latest milestone signifies a major step in Malaysia's digital transformation journey

Kuala Lumpur, 11 October 2024 - MyDigital ID, a trusted identity management and authentication platform by MyDigital ID Sdn Bhd has surpassed 1 million registered users in less than one year of its implementation. The milestone reflects the rapid adoption of MyDigital ID, showcasing Malaysian's readiness in embracing digital transformation for a more secure, convenient, and efficient way to access government and private sector services online.

The achievement also marks a significant step in Malaysian's journey towards becoming a digitally driven nation. It is also a testament to the increasing awareness and enthusiasm of Malaysians in adopting digital technology.

First announced in November 2023, MyDigital ID is recognised nationally as a trusted form of digital identification management, providing secure authentication for online transactions and addressing vulnerabilities present in the existing online identity verification system. As a key component in driving the national's digital identity transformation, MyDigital ID provides citizens safe and secure access to essential services such as government facilities, financial services, education, and healthcare, amongst others.

Chief Executive Officer, MyDigital ID Sdn Bhd, Encik Mohd Mirza Mohamed Noor said "We are incredibly grateful to our users for their confidence in MyDigital ID and their proactiveness in protecting themselves in an ever-challenging digital future. Their participation plays a vital role in realising Malaysia's MyDigital ID's aspirations, and it is clear that Malaysians are ready to make the shift toward secure and efficient digital services."

MyDigital ID's comprehensive services include access to secure e-government services in addition to banking, telecommunications, healthcare, and more in the coming future. As Malaysia accelerates its digital transformation efforts, MyDigital ID is the trusted digital key that unlocks, enabling faster, safer, and more convenient access to essential services while protecting user privacy and data integrity.

Currently, the MyDigital ID application has now been integrated with several government applications such as the Human Resources Management Information System (HRMIS) Mobile, MySejahtera, MyGov portal as well as MyJPJ. The platform will also see integration with popular applications in the near future.

For those who have yet to register, they will simply need to download the MyDigital ID app via the Google Play Store or Apple App Store on their respective smartphones and begin their registration process without the need of visiting any kiosks. After signing up for MyDigital ID, Malaysians no longer need to log in into different platforms using different passwords - only one verification system is needed for applications and portals to log in.

The MyDigital ID system would be used to verify a user's identity for login to government platforms and transactions, and data would not be collected. The system only compares the information contained within a MyKad and a user's fingerprint or facial features against existing data held by government agencies such as the National Registration Department (NRD) during the registration process.

The implementation of MyDigital ID marks a pivotal step towards a more user-friendly and secure digital environment, aligned with the government's vision of harnessing technology to empower its citizens. MyDigital ID Sdn Bhd would also like to emphasise and assure Malaysians that MyDigital ID does not store any biometric data of its users. It also does not collect, monitor or store personal data, all while ensuring users do not have more than one digital identity as safety measures.

Stay tune for more information on MyDigital ID integration with other services by quarter four 2024.

The registration for MyDigital ID is still open to all Malaysian citizens. For further information on MyDigital ID, please visit www.digital-id.my.

About MyDigital ID Sdn. Bhd.:
MyDigital ID Sdn. Bhd., a subsidiary of MIMOS Berhad, was established on 15 January 2024. Positioned at the forefront of national digital identity management, we offer innovative solutions that enhance security, improve user experience, and build trust in the digital landscape. Committed to excellence and user satisfaction, we are poised to lead the way in the future of digital identity.

About MyDigital ID:
MyDigital ID is a safe and trusted digital identity platform that is designed to strengthen and simplify online identity verification, without replacing the MyKad system. It works as a single login solution for digital services, offering greater safety and accessibility to citizens in accessing online services and performing transactions.

MyDigital ID prioritises data safety and privacy. It does not store any biometric data or personal database and does not function as the replacement of MyKad for identification purposes.
